

iTRACS

Vision Technologies' Technical Services Group

Making Vision Reality

Known as infrastructure modeling software, iTRACS is the world's first open, scalable, and intelligent connectivity discovery and management system. Designed to maximize the efficiency and minimize the paper documentation of IT networks and structures cabling systems; iTRACS automates infrastructure documentation and streamlines asset management.

Vision Technologies solutions will automate the process of discovering, documenting, monitoring, and managing the physical network's connections and connected devices from end to end. By implementing iTRACS comprehensive, accurate, real-time tracking with 24/7 monitoring and automatic change management, Vision Technologies streamlines an organization's IT infrastructure operations.

- Customized Planning and documenting of your enterprise
- Simplifies troubleshooting
- Self discovers patch cord connections
- Provides real-time centralized management
- Updates the iTRACS database automatically when a change occurs
- Web interface management of your database
- Accurate real time tracking
- Wizard based tasks proving for a user friendly database creation and management system
- Retrofits to any existing network hardware
- Identifies workarounds to decrease network downtime
- Reduces MAC costs substantially
- Enhances security in data centers and wiring closets
- Creates audit trails and logs
- Updates work orders automatically
- Differentiates between authorized and unauthorized changes
- Instantly responds to changes by running event scripts such as alerts, email or even taking photos
- Compatible with Windows 2000/2003/XP
- Compatible with PDA's running Pocket PC software
